

Environmental Technical Standard

What is an “Environmental Technical Standard (RMS-0002)”?

To Our Valued Customers and Business Partners,

This standard outlines the definition and management of *environmentally controlled substances*—materials found in products, components, or raw materials that may significantly impact the global environment and human health.

The purpose of RMS-0002 is to:

- Clearly identify substances that are **prohibited, targeted for elimination, or exempt**.
- Prevent or minimize contamination in products.
- Support efforts to reduce environmental impact and protect ecosystems.

In addition to the substances specified in this standard, any materials that are restricted or prohibited under the laws and regulations of individual countries or regions must also comply with those legal requirements.

Message to Our Business Partners:

We appreciate your cooperation in helping us develop products that contribute to global environmental conservation and ecosystem protection.

Please refer to the full Environmental Technical Standard below for detailed guidance.
