1 Purposes

This Technology Standards is intended to observe applicable laws, protect the Earth's environment, and reduce harmful effects on the ecosystem through the prevention of the use of environmental management substances in parts, devices, and other products made up of Magnescale products.

In addition, Magnescale Co., Ltd. complies with customer demands of the Green purchasing requirement and others.

The main applicable laws and regulations are the European RoHS Directive, the European REACH Regulation, the U.S. TSCA regulation, the Chemical Substances Control Law, and the Stockholm Convention (POPs Convention).

2 Scope

Applies to our products and OEM products and the following products that make up their packaging.

2.1 Scope of application for parts/materials

This applies to parts, materials, and other articles that are adopted for those designed and manufactured by Magnescale and outsourcing of manufacturing.

The targets shall meet reference values specified in this standard.

Targeted Parts and Materials

- 1) Half-finished products (assembly parts including functional units, modules, board assemblies and optical fiber assemblies),
- 2) Parts (electric parts, mechanical parts, semiconductor devices, printed circuit boards, recording media, and packaging and raw material), and screws.
- 3) Accessories (AC adapters, cable assemblies and others for using equipment)
- 4) Indirect materials used in products (including materials used in adhesive tape, solder material, tie strap, labels, adhesive agents, etc.)
- 5) Printed matters (including operating manuals, warranty notes, and supplemental information regarding products and parts)
- 6) repair parts
- 7) Packaging and materials defined in 5.1 "Definition of package parts and materials," used for transportation and protection of parts by the delivery agent.
- 8) Batteries

2.2 Scope of application for products

- 1) Magnescale products designed, manufactured, sold, leased or distributed by Magnescale Co., Ltd.
- 2) Magnescale products outsourced to the third parties to design and manufacture, and sold, leased or distributed under the Magnescale brand
- 3) Third parties' products outsourced to Magnescale Co., Ltd to design and manufacture
However parts/materials designated by a third party are excluded from the scope of application.

Furthermore, even if not explicitly defined in this standard, in the event that substances and associated applications prohibited and/or restricted by ordinance and regulatory requirements in each country, the ordinance and regulatory requirements shall be observed.

Laws and regulations are subject to change, so please refer to the latest version of each regulation for more information.

3 Terms and definitions

3.1 Environment-related substances to be controlled (Controlled Substances)

- 1) Accumulative/persistent/carcinogenic/reproductive toxicity substances that are likely to adversely affect the human body and prohibited and/or restricted by ordinance and regulatory requirements in each country
- 2) Substances that are restricted by customer's green procurement standard, and also the substances that are judged as necessary to be restricted by Magnescale Co., Ltd.

In the event that Magnescale standard is unable to satisfy an external requirement, external requirement shall have priority, and focus on external demands and add substances individually.

- 3) Substances that are contained in materials and/or parts and judged by Magnescale Co., Ltd. to have a significant impact on environment and/or human body

3.2 Management level

Terms used in these management levels are defined as given below.

- 1) Level 1 (environment prohibited substances)

The substances and their applications classified into this level are those that are banned for the use in parts and materials.

- 2) Level 2 (environment prohibited substances)

On the date set in each table, the substances and their applications in the respective tables shall be reclassified into Level 1.

- 3) Level 3 (environmental controlled substances)

Considering possibility of phase-out in the future (i.e., reclassification into Level 2), use may be prohibited.

- 4) Exception

Considering items excluded from laws and regulations, also exclude things from the targets of 1) 2) 3).

3.3 Contained

The condition that a substance remains in materials used for part and/or materials by addition, filling, mixture or adhesion, regardless of one's intention.

Even in the case a substance unintentionally got mixed in or adhered to a product in a processing process, we also consider this as "contained".

3.4 Intentional addition

The condition that a substance remains in materials used for parts and/or materials by intentional addition, filling, mixture or adhesion to give a specific characteristic, appearance, property, attribute or quality.

- 1) With respect to the substance which is contained in a natural material and technically not possible to be completely removed by the refining process, also the substance which is generated by the synthesis reaction and technically not possible to be completely removed, those substances are judged as impurities and not considered as "intentional addition".

- 2) With respect to the substances called "impurities" which are distinguished from main material, when they are used for the purpose of changing a characteristic of the material such as alloys, it is considered as "intentional addition".

However, for dopants to produce semiconductor devices, etc., even when extremely small amount is remaining, it is not considered as "intentional addition".

3.5 Target

Elements (parts, materials, use, processing) that require to be controlled according to each "management level (described in 3.2)".

3.6 Criteria/threshold level

This criteria/threshold level means each "management level (described in 3.2)" or "concentration limit".

When a Criteria/Threshold level shows both " Intentional addition " and a numerical threshold level, the numerical threshold level applies when not intentionally added (impurity).

3.7 The date of ban the receipt of materials and/or parts.

The date on which Magnescale Co., Ltd. ban the receipt of materials and/or parts.

3.8 Plastic

Plastics refer to materials and raw materials composed of synthetic high-molecular polymers in this standard.

More specifically, "plastics" mainly mean the following articles composed of synthetic high-molecular polymers: resins, films, adhesives, adhesive tapes, molded products, products made of synthetic rubber, and plastics made from raw materials of plant origin.
